**Description**

The **MPS-253011-02** is a modular amplifier designed to meet the ultralinear transmitter output requirements of worldwide ISM band systems and wireless cable distribution. The amplifier exhibits an extremely high IP3 (+45 dBm). The device is self contained with all matching and bias circuitry included. Typical applications for this device include output stages for North American and European 2.4 GHz ISM band and MMDS band systems. It is useful for direct sequence and or frequency hopped spread spectrum systems where excellent output linearity is required. Typical systems include wireless LAN, industrial telemetry, and wireless cable links.
